

Good for you. Good for planet earth.

The Axia® chair has a modular construction. In other words, it is made up of separate parts. The benefit of this is that parts are easily replaced and chairs can be built to your specific requirements. A modified seat, wider armrests, a higher backrest. BMA provides bespoke chairs for everyone!

One extra benefit is that, after years of intensive use, you only have to replace the parts that truly require replacement. Good for you, good for your wallet and good for planet earth.

Seating comfort for everyone

We are all unique and all sit differently. What's more, we are sitting more and for longer. And that's why a responsible office chair is essential. So you can sit in all health and comfort. Day in, day out.

As specialist in the field of sitting, BMA Ergonomics has a solution for everyone. User-specific modifications to a chair mean that every user sits comfortably on an Axia®.

Give it a Try!

We look forward to telling you all about ergonomics and your perfect chair. Not only with our expert eye, but also with great pleasure. Sitting properly is after all our passion. And we're keen that you enjoy it too. Which is why we are offering you the chance to try out a chair entirely free of any obligation. For we are keen for you to feel the difference. And because we are certain that a BMA chair is just what you need!

Do you require a bespoke chair?

Axia® customisation just the right support for everyone

www.bma-ergonomics.com

Small or light?

Are you small or light? Then it is likely that you do not like sitting on a standard chair. The armrests are too far apart, the seat is too high even in its lowest setting, or the chair gives too much counter pressure. The solution is a chair with a modular construction that can be adapted to your height and weight. In short, a bespoke chair from BMA!

Seat cushions with extra foam

Inflatable backrests

Tall or heavy?

Are you tall or heavy? Then you probably maintain an unnatural posture. With bent wrists and raised shoulders. Or slouching. This can lead to health problems. A BMA chair sees a unique challenge in every person and provides optimum support. Even if you are taller or heavier.

Scrotum recess

Also for medical issues

Maybe you have a pronounced hollow back or suffer from joint problems. Or you've recently had a hernia. Then the right support is more important than ever. Pelvic instability, varicose veins or a painful coccyx all require targeted modifications to the chair so you remain fit and relaxed throughout the day and beyond. BMA will adjust the seat, backrest, armrests or head rests for you.

Coccyx recess

Armrests with extra foam

Axia® customisation is available for all types of Axia® in any model
